and concrete design engineers
are positioned on the
the exhibition by a 400 km
in the center

Photonews

1. Service reservoir, Durban, South Africa. Its diameter is 57.5 m, depth 10.0 m, and capacity 75 M gal. The roof construction is described as concrete walls threaded on steel cables which release from the roof tanks.
Design: Durban City Council's Department of special works.
Contractor: Rogers Construction Pty Ltd.

2. Fanned water tower for the water supply company in Epsom. Its height is 98 ft, diameter 42 ft and capacity 40,000 gallons. The fanned tower is not the first of its appearance to be built in Epsom, and the water tower of the Lee

several buildings where
techniques had been used
representative finish to concrete
finishing, to the visitor not

 Precast concrete: some statistics for countries in Western Europe 3:84
 Precast concrete, the Amsterdam congress on 7:289, 8:331, 9:379
 Precast concrete? why 12:482
 Precast concrete works and projects in the Netherlands, some 5:198
 Precasting works, automatic control at a 2:50
 Pressure vessels, model techniques for prestressed concrete 9:355
 Pressure vessels, wire winding system for prestressing 10:391
 Prestressed reinforced concrete beams, tests on 11:457
 Prestressing, sixth international congress on 4:118
 Property developer's view of the construction industry 3:95
 Pumps, mobile small-bore concrete 11:430
 Rail foundation system laid with a slip-form paver 8:309
 Ready-mix, free style 5:176
 Reinforcing bars under fluctuating stress, the behaviour of 10:405
 Reinforcing steel, consumption of 1:34
 Roads, first European symposium on concrete 5:178
 Roads in Essex, concrete 4:164
 Roads, recent constructional trends for concrete 3:90
 Road, technology of the concrete 9:352
 Rochon dam, Seychelles 7:286
 Roof tiles 4:140
 Ruhr, a visit to some notable constructional work in the 12:472
 Serial tendering and fixed-price contracts 10:396
 Shearing strength of concrete, a new method for determining the pure 2:63
 Shell roofs for the market hall, Huddersfield 4:160

- SI system of units, an international conference on the 8:314
- SI units, elastic design using 9:360
- Simultaneous equations, analysis of continuous structures by 4:157
- Site, lessons from the 4:144
- Slabs by the yield-line theory, coefficients for the design of 5:171
- Slabs of beam-and-slab panels by the yield-line theory, coefficients for designing 12:486
- Slab strips restrained against longitudinal expansion, load-carrying capacity of 9:369
- Slip-form paver for jobs of limited scale 8:306
- Slip-form paver, rail foundation system laid with 8:309
- Southampton conference, a report on the 6:237
- Specifications for concrete 2:59
- Split concrete blocks, an award-winning example of the use of 5:193
- Standardized calculations, a note on the Concrete Society's regional meetings on 12:476
- Standardized procedure for the presentation of calculations 12:503
- Steam-curing regimes for large concrete components, the selection of optimum 9:363
- Steel for the reinforcement of concrete, the properties and use of 2:51
- Strategy of planning in the northern region 4:136
- Stock Exchange, the new 5:184
- Strand reinforcement for concrete, high-strength 4:127
